```
Human nucleic acid fragments, isolated from brain adrenal tissue, the placenta or bone marrow comprise any of: (A) a sequence selected from (AAQ76401-Q77613), (B) an allelic variation of a sequence as described in (A), or (C) a sequence complementary to (A) or (B). (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; breast cancer-associated gene; BCA-related disorder; lymphoma; infectious disease; eating disorder; cancer; Ewing's tumour; allergy; tumour; polycythaemia vera; forensic biology; gene therapy; leukaemia; bone disease; sarcoma; vaccine; gene; ss.

New breast cancer-associated (BCA) genes and polypeptides, useful for preventing, treating, diagnosing or staging breast cancer, or other BCA-related disorders, e.g. prostate cancer, sarcoma, Ewing's tumor, leukemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Classifying an ovarian tumor as a BRCA-1-like or BRCA-2-like or non-BRCA-
like tumor by determining a pattern of expression in the ovarian tumor of
                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to human breast cancer-associated (BCA) genes and polypeptides. BCA sequences are useful for preventing or treating breast cancer. Other BCA-related disorders that may be treated include allergy, bone disease, eating disorder, infectious disease, ovarian cancer, prostate cancer, skin cancer or brain cancer, malignant or non-malignant tumours, sarcoma, Bwing's tumour, leukaemia, lymphomas, or polycythaemia vera. BCA sequences are also useful in forensic biology, diagnostic assays or poharmacogenomics or for monitoring clinical trials. The invention is useful in gene therapy and as vaccines. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ovarian cancer-related DNA #221 with altered ovarian cancer expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    gene; ovarian tumor; BRCA-1-like; BRCA-2-like; non-BRCA-like;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GAAGATAATGTCTCAGAAAATGTGGGTTCTGTGTGTGCCACT 267

the specification, and (2) congaring a similarity of the pattern of expression of the markers in the ovarian tumor to a pattern of expression of the markers in the ovarian tumor to a pattern of expression of the markers in a comparison tissue of a known BRCA-1-like or BRCA-1-like tumor. The method is useful for classifying an ovarian tumor as a BRCA-1-like or BRCA-2-like or non-BRCA-like tumor. This sequence corresponds to an ovarian cancer -related gene having an altered pattern of expression in ovarian cancer. (Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         colon cancer polypeptides and polynucleotides, useful as vaccines, diagnosing, preventing, and treating colon cancer, and as markers for progression of cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to polynucleotides encoding colon tumour proteins. The polynucleotides and encoded polypeptides are useful in pharmaceutical
                                                            The invention relates to a method of classifying an ovarian tumor as a BRCA-1-like or BRCA-2-like or non-BRCA-like tumor by: (1) determining a pattern of expression in the ovarian tumor of several markers given in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; colon tumour; vaccine; colon cancer; immunogenic; immunotherapy;

human colon tumour proteins of the
SEQ ID No 1 and 2, the sequence
of the printed specification but
                     treatment of colon cancer. Polynucleotide sequences may be used as hybridisation probes or primers, and in the design and preparation of ribozyme molecules for inhibiting expression of tumour polypeptides and proteins in tumour cells. The compositions are useful for stimulating an immune response against cancer, particularly for the immunotherapy of colon cancer, and as markers for the progression of cancer. ABK4450-ABK46337 represent coding sequences of human colon tumour proteins of the invention. Note: With the exception of SEQ ID No 1 and 2, the sequence data for this patent did not form part of the printed specification but
   such as vaccines, for the diagnosis,

(CORI-) CORIXA CORP.

Algate PA, Mannion J; WPI; 2001-488879/53. New polynucleotides encoding ovarian tumor proteins, useful for treating ovarian cancer, and as probes, primers, and markers of cancer progression.

Example 1; Page 304; 378pp; English

The invention comprises compositions used for the therapy and diagnosis of ovarian cancer. The compositions comprise one or more ovarian tumour proteins, their associated polynucleotides, or immunogenic portions of the proteins. The ovarian tumour polynucleotides and polypeptides are useful for stimulating and/or expanding T cells specific for a tumour protein. They are also useful for inhibiting the development of cancer in a patient with an ovarian tumour DNA or protein by incubating isolated T cells allowing them to proliferate, and administering to the patient.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAH82377 to AAH83878 represent human ovarian tumour-associated polymucleotide sequences which encode ovarian tumour proteins. The ovarian tumour protein and polymucleotide sequences have cytostatic activity, and can be used in gene therapy and vaccine production. The ovarian tumour proteins and polymucleotides can be used to inhibit the development of cancer, particularly ovarian cancer. They can also be used to diagnose the onset and progression of cancer
sequences can be used as markers for cancer, for example, to monitor ovarian cancer progression. Probes and primers are useful in nucleic acid hybridisation, in detecting the presence of complementary sequences in a given sample, for preparing mutant species and for preparing other genetic constructions. Sequences AAS23820-AAS25231 and AAS25328-AAS25549
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human ovarian tumour associated polynucleotide sequence SEQ ID NO:1340.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       r proteins, and nucleic acids encoding them, used cancers, particularly ovarian cancer.

The invention relates to a method of classifying an ovarian tumor as a BRCA-1-like or BRCA-2-like or non-BRCA-1ike tumor by: (1) determining a pattern of expression in the ovarian tumor of several markers given in the specification; and (2) comparing a similarity of the pattern of expression of the markers in the ovarian tumor to a pattern of expression of the markers in the ovarian tumor to a pattern of expression of the markers in the method is known BRCA-1-like or BRCA-2-1ike or non-BRCA-like tumor. The method is useful for classifying an ovarian tumor as a BRCA-1-like or BRCA-2-like or non-BRCA-like tumor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence corresponds to an ovarian cancer -related gene having an altered pattern of expression in ovarian cancer. The invention relates to a method for diagnosing a disorder characterised by expression of a human cancer associated antigen precursor coded for by a nucleic acid molecule (NAM). The method comprises: (a) contacting a biological sample isolated from a subject with an agent that specifically binds to the NAM, an expression product or a fragment of an expression product complexed with an HIA molecule; and (b) determining the interaction between the agent and the NAM or the expression product as a determination of the disorder. The products and methods can be used in the diagnosis, monitoring, research, or treatment of conditions characterised by the expression of various cancer associated antigens. The invention provides nucleic acid sequences and encoded polypeptides which are cancer associated antigen precursors expressed in human breast cancer, renal cancer, colon cancer, gastric cancer, prostate cancer and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated cancer associated nucleic acids and polypeptides - isolated using sera from cancer patients, used to develop products for the diagnosis, monitoring or treatment of cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 804 BP; 208 A; 172 C; 188 G; 222 T; 0 U; 14 Other;

```
This sequence is the human Cyclin I nucleotide sequence. Cyclin I is expressed at almost constant levels throughout the cell cycle, and is implicated in controlling cell cycle progression and transcriptional control. Cyclins form complexes with cyclin-dependent kinases. CDK2, control. Cyclins form complexes with cyclin-dependent kinases. CDK2, cyclin-dependent kinases. CDK2, cyclin-dependent kinases. CDK2, cyclin-dependent kinases. CDK2, cyclin-dependent kinases. CDK2, cyclin-dependent kinases. CDK2, is used in the invention which relates to complexes of the CDK2 protein with other proteins, selected from cyclin in ERH, hsReq, hsReq*-1 and hsReq*-2 (AAY52185-Y52188). CDK2 is expressed it is an unclocitie sequences complex, an antibody targeting transition. Compositions containing a CDK2 complex, an antibody targeting can be used therapeutically. The complexes and their nucleotide sequences can be used to treat diseases or disorders associated with increased or decreased levels of the complex. Screening the complex can be used to indicate if the the complex has anti-neoplastic activity. Screening for molecules that modulate the complexes can be used for treating or preventing c thereosclerosis or atherosclerosis catherosclerosis associated disease by contacting cells
complexes of the cyclin-dependent kinase 2 protein with its sracting proteins, used to treat, e.g. atherosclerosis.
                                                                                                                                                                                  Example, Fig 2; 90pp; English.
                                                                            interacting proteins,

The invention relates to detecting (MI) granulocyte (GC) activation (GCA), by detecting the level of expression of gene(s) (Gs) identified by DNA chip analysis as given in the specification, and comparing the expression level in an unactivated GC, where differential expression of Gs is indicative of GCA. Also included are modulating (M2) GA by contacting GC with an agent that alters the expression of at least one gene in Gs; (2) screening (M3) for an agent capable of modulating GCA or an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease using the gene expression profile; (3) detecting (M4) an inflammation (especially chronic) in a

tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by detecting the level of expression in a sample of the tissue of gane(s) from 6s, where the level of expression of the gene is indicative of inflammation; (4) treating of expression of the gene is indicative of inflammation; (4) treating cof expression of subject to a pathogen or sterile inflammatory disease, by contacting a tissue having inflammation with an agent that modulates the expression of gene(s) from Gs in the tissue. MI contacting GCA, MI is useful for detecting of the modulating GCA preferably in an inflammation in a tissue; M4 is useful for detecting an inflammation of inflammation in a tissue; M4 is useful for detecting an inflammation of especially chronic) in a tissue, an allergic response in a subject to a pathogen or sterile inflammatory disease (e.g. exposure of a subject to a pathogen or sterile inflammatory disease (e.g. psoriasis, rheumatoid arthritis, glomerulonephritis, asthma, thrombosis, cardiac repetitision injury, renal repertuion injury, ARDS, adult respiratory distress syndrome, inflammatory bowel disease, conditions. The present sequence repersente a gene differentially conditions. The present sequence repersente a gene differentially conditions. The present sequence repersence a gene differentially confit form wart of the printed specification, but was obtained in celectronic format directly from WIDO at

                                                The invention relates to a method of classifying an ovarian tumor as a BRCA-1-like or BRCA-2-like or non-BRCA-like tumor by: (1) determining a pattern of expression in the ovarian tumor of several markers given in the specification; and (2) comparing a similarity of the pattern of expression of the markers in the ovarian tumor to a pattern of expression of the markers in a comparison tissue of a known BRCA-1-like or BRCA-2-1-like or non-BRCA-like tumor. The method is useful for classifying an ovarian tumor as a BRCA-1-like or BRCA-2-like or non-BRCA-like tumor. This sequence corresponds to an ovarian cancer. (Note: The sequence data for this pattern of expression in ovarian cancer. (Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A composition comprising a plurality of CDNAs, useful for detecting altered expression of genes in an immunological response or for diagnosing and treating an immunopathology, e.g. Crohn's disease, asthma or osteoarthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; gene; ss; immunological response; immunopathological condition; Crohn's disease; asthma; ulcerative colitis; hypereosinophilia; irritable bowel syndrome; osteoarthritis; rheumatoid arthritis; acute monocytic leukaemia; antiinflammatory; antiatic; antiulcer;
                                                                                                                                                                                                                                       Sequence 1260 BP; 352 A; 283 C; 274 G; 351 T; 0 U; 0 Other;

Claim 1; SEQ ID NO 899; 50pp; English.

```
The invention relates to a composition comprising a plurality of cDNAs for detecting the altered expression of genes in an immunological response. The invention also relates to a method of diagnosing or monitoring the treatment of an immunopathological condition in a sample, comprising obtaining nucleic acids from a sample, contacting the nucleic acids of the sample with an array comprising the plurality of cDNAs under conditions to form one or more hybridisation complexes and comparing the levels of the detected hybridisation complexes with the level of hybridisation complexes with the level of hybridisation complexes or an altered level of the detected hybridisation complexes correlates with the presence of an immunopathological condition. Also disclosed are an expression profile comprising a microarray and a plurality of detectable complexes and a microarray and a plurality of detectable complexes and a method for identifying a plurality of polynucleotide probes. The cDNAs are useful as hybridisable array elements in a microarray for monitoring the expression of target polynucleotides. The microarray for monitoring the expression of target polynucleotides. The microarray for monitoring confernity in appears for the treatment of the disease, asthma, confernitying agents for the treatment of the diseases. The microarray may also be used in drug discovery and development, toxicological and carcinogenicity studies, forensics or pharmacogenomics. The composition carcinogenicity studies, forensics or pharmacogenomics. The composition carcinogenic fragments. This sequence represents a human cDNA of the invention. Note: The sequence data for this patent did not form part of from INDAD at sendar and an expression of the printed specification but was obtained in electronic format directly from a permitted specification but was obtained and a proposition of the printed specification but was obtained and contact of the printed specification but was obtained but and an electronic format directly and an electronic format 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 1260 BP; 352 A; 283 C; 274 G; 351 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ADR25465
```

```
The invention relates to a method of classifying a breast cancer patient according to prognosis by determining the similarity between the level of expression of each of five genes for which markers are listed in the specification, in a cell sample taken from the breast cancer patient, to control levels of expression for each respective five genes to obtain a patient similarity value. The methods are useful for classifying a breast cancer patient according to prognosis. Kits and computer program products are useful for data analysis using the diagnostic, prognostic and statistical methods of the invention. This sequence corresponds to a
Classifying a breast cancer patient according to prognosis comprises determining the similarity between the level of expression of each of five genes in a cell sample taken from patient, to control levels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human cyclin I protein and related (anti:sense) DNA - used for neuron labelling method and cancer cell detection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   are

```

```
CC neurones by hybridisation with mRNA for cyclin I (contained in the cC neurones and arising by the expression of the cyclin I gene in these CC cells). The gene can be used for detection of cancer cells by detecting CC the expression of the cyclin I gene in these cells. Also antibodies CC specific for the fragments of the protein (especially AAW21966) can be CC used for detection.

                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  US-0054492B-2

JUS-054492B-2

Sequence 2, Application US/09054492B

Patent No. 6218115

GENERAL INFORMATION:
APPLICANT: TAKESH NUMAN CYCLIN I AND GENES ENCODING SAME
TITLE OF INVENTION: HUMAN CYCLIN I AND GENES ENCODING SAME
NUMBER OF SEQUENCES: 5
CORRESPONDENCE ADDRESS: 5
CORRESPONDENCE ADDRESS: 5
CORRESPONDENCE ADDRESS: 5
CITY: WASHINGTON
STREET: 1100 NEW YORK AVENUE, N.W.
CITY: WASHINGTON
STRATE: D.C.
COUNTRY: U.S.A.
ZIP: ZO005
COMPUTER: LEM PR COMPATIBLE
COMPUTER: PELOPPY DISK
COMPUTER: PELOPPY DISK
COMPUTER: PER PROPATIBLE
OFFRATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PATENTIN RELEASE #1.0, VERSION #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/09/054,492B
FILING DATE: APRIL 3, 1998
CLASSIFICATION NUMBER: US/09/054,492B
FILING DATE: WHITE, UR.
REGISTRATION NUMBER: 32,011
REFERENCE/DOCKET NUMBER: 32,011
REFERENCE/DOCKET NUMBER: 73,010
FELEPHONE: (202) 861-3000
                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence

Sequence 20816, Application US/10085783A

Publication No. US20040037841A1

GENERAL INFORMATION:
APPLICANT: ChondroGene Inc.
TITLE OF INVENTION: Compositions and Methods Relatiing to Osteoarthritis
FILE REFERENCE: 4231/2002
CURRENT APPLICATION NUMBER: US/10/085, 783A

CURRENT PILING DATE: 2002-02-28

PRIOR PILING DATE: 2001-07-13

PRIOR FILING DATE: 2001-03-12

PRIOR FILING DATE: 2001-03-12
